BLUEDOP

This 510k Doppler ultrasound system integrates a Bluetooth® handheld probe with a tablet-based application to capture, display, and store continuous-wave Doppler waveforms. By combining Doppler data with manually entered blood pressure readings, the system automatically calculates Ankle-Brachial Index (ABI) measurements, supporting efficient vascular assessment and documentation.

Key Features

- Comprehensive Reporting
- Self-populating fields capture assessment detail so nothing is missed
- Combines medical history, same-day blood pressure and waveform data in a shareable PDF report.
