

Custom blood wound solutions

The FastSkin® Patch is an autologous cell therapy prepared directly at the point-of-care. Using a small sample of the patient's own whole blood, the device generates a ready-to-apply self-supporting whole blood clot in 10 minutes for the management of exuding cutaneous wounds⁴, without the need for a centrifuge.

FastSkin® Patch

Personalized Bioactive Matrix

Providing custom patient care.
Part of EmeraNova's portfolio
of Restore solutions.

EmeraNova™
