Triple-Layer Amniotic Membrane

Quality

Our state-of-the-art processing methods incorporate rigorous quality controls within an ISO Class 7 cleanroom environment, utilizing ISO Class 5 biological safety cabinets (BSCs) for critical processing activities. Donated human tissue is carefully processed, air-dried, and precisely cut into various sizes prior to undergoing electron-beam (e-beam) sterilization. Our comprehensive, multi-stage visual inspection process includes repeated quality checks throughout processing to assess tissue coverage, layering consistency, and overall product integrity. Our processing methods are designed to preserve the tissue's relevant natural characteristics and structural integrity, supporting its intended homologous use.†

Key Features

- Readily Available
- Easy Application
- 5-year Shelf Life†
- FDA Compliant**
- AATB Accredited

Sizing

Size cm²	SKU	Total cm²
1x1	TM0101	1
2x2	TM0202	4
2x3	TM0203	6
4x4	TM0404	16
4x6	TM0406	24
4x8	TM0408	32
6x8	TM0608	48
10x10	TM1010	100
20x15	TM2015	300

*All Tri-Membrane Wrap™ allograft tissue products have been tested for potentially infectious diseases and terminally sterilized to ensure the safety of each membrane.
**Complaint with applicable requirements of 21 CFR Part 1271
